DETAILED ACTION

Drawings

Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

⁽b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Butterworth, U.S. Patent 5,207,879.

Butterworth discloses the claimed method for controlling the pH in an acid loop by the electrodialysis cell in operation within two pH units (see col. 2, lines 30-50 and claims 1-11). The pH would be maintained within two units, since the quantity of the acid is said to remain substantially constant. The fact that the pH in the acid loop would protect the bipolar membrane would be inherent to the process disclosed in Butterworth.

Accordingly, since the Butterworth patent discloses each and every method step, the claims are rejected.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Mani, U.S. Patent 6,221,225 B1.

Mani discloses the claimed methods for the treatment of base of acid loops to maintain the pH within claimed ranges by the use of combinations of salt or acid/base to form the buffer as claimed (see col. 12, lines 7-13 and col. 13, lines 8-57). The addition of the base and/or the acid or salt would form the buffer and maintain the pH within the desired range within the acid or base loop as claimed. The base and acid are controlled externally to the stack (see figure 7 for example

Art Unit: 1753

which shows the use of base and acid tank external to the electrodialysis stack).

The temperature would be ambient and would range within the claimed range.

Consequently, the claims are rejected.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun 5. Phasge whose telephone number is (571) 272-1345. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam X. Nguyen can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
